### Quarterly performance

Fund	+6.1%
Indicator	-7.1%

### Performance over 1 year

Fund	-17.1%
Indicator	-33.8%

**To achieve its positive performance this quarter of 6.3% compared with a fall of 7.1% in the global share price index, the Fund profited from our accurate economic forecasts to take full advantage of the scope offered for international equity management.** In terms of exposure to equity risk, for a long time Carmignac Investissement remained invested at the legal minimum of 60%, before exposure was taken back up to 100% at the beginning of March. The pick of investment themes then played a part: the significant weighting in gold mines and defensive stocks provided a generous buffer during periods when the equity markets were weak. Finally, the use of equity and currency hedges made a significant contribution to the Fund's strong outperformance.

### Economic analysis

In our last report, we expressed a firm view regarding the disastrous climate of the time: *"the slowdown was created artificially: it was not triggered by a 'natural' fall in demand. A relative normalisation of credit, even a modest one, could prompt a sharp upturn in activity, if only through the reconstitution of stocks. Such an upturn, even fragile, is likely to give the depressed markets a real boost. European and American businesses are trading at their lowest valuation levels by comparison with their balance sheets or sales since 1990."*

While it is still too soon to confirm forecasts of a "sharp upturn", the reversal is nevertheless clear (see **Carmignac Patrimoine** report), with an abrupt U-turn in the untenable negative trend illustrated by the 94.5% fall in freight in less than a year. The attempts by the monetary authorities and governments to curb deflationary pressures resulting from the long deleveraging process took a new turn this quarter with the next stage in the US bail-out plan and the G20 summit in London.

The imminent launch of the Geithner Plan, following the mixed success of the Paulson Plan (TARP), is now starting to win the support of the industry, which had initially rejected it as being too complex. So what will it involve? Government-approved investment companies will be able to sign up to manage portfolios of toxic assets sold to them by banks in order to free up their balance sheet, restore their solvency and indirectly restart lending. To do this, the Treasury will allocate USD 100 billion to these funds, to which private investors will also contribute USD 100 billion. The Federal Reserve and Federal Deposit Insurance Corporation (FDIC) will then increase this

amount to USD 1000 billion. The aim is to kick-start the toxic assets market by assigning a value to them based on the fairest possible market prices. This will fill the huge gap between their valuation by financial institutions based on inherently questionable models, and the equally dubious valuations for sales by troubled banks. These public-private partnerships, galvanised by the positive asymmetry created for the buyer (by matched contributions), together with the recent relaxation of accounting standards for valuing illiquid assets held by banks, should allow those who wish to sell them to find buyers and those who prefer to keep them to remove the suspicions surrounding their valuations. Some leading investment firms have already expressed an interest. The "normalisation of credit" appears to be under way.

Simultaneously, the G20 summit in London seems to have sparked a crisis of confidence thanks to the unwavering determination shown by its members to tackle the crisis any which way. The major beneficiary of the G20 summit was without doubt the IMF, which gained an additional contribution of USD 1,000 billion in various forms. The message is clear: the global economy cannot recover while emerging countries are still weak. It goes without saying that we are delighted with the official recognition of the role that emerging countries have in the economic recovery through global rebalancing. Deleveraging in developed countries can only weaken their internal demand, which must be offset by growing demand from emerging countries. February's US trade balance figure illustrates this point perfectly: the US trade deficit fell to USD 26 billion, compared with USD 36 billion the previous month (and a monthly average of USD 60 billion the same time the previous year), caused by falling demand for imports and stability of exports, largely due to the Chinese market. Although the G20 is giving aid to struggling emerging countries, the more robust of them are already showing signs of recovery. Figures from China suggest a resilience that surprises even the most optimistic analysts, even though the rescue plan announced in November has not yet had a chance to take full effect (see **Carmignac Emergents** report). The upheaval caused by the crisis is widespread and deep-rooted, although the most obvious and useful conclusion for investors is that **this crisis will act as a catalyst for global economic rebalancing**. Purging the excess debt of developed countries will slow their growth over the long term, while the potential of emerging countries remains intact, with these regions continuing to become increasingly self-sufficient.

## Investment strategy

The green shoots suggested by the leading indicators of the US economy and signs that the equity markets are capitulating (with Citigroup trading at less than a dollar and General Electric at five dollars) persuaded us to raise equity exposure from 60% to 100% at the start of March. We intend to maintain this level so as to profit fully from the rebound in the global economy following the excessive pessimism witnessed between October and February.

**Cash and cash investments were significantly reduced from 28.6% to 9.3% of assets.** At the same time, our hedges protecting the Fund against a market downturn in developed countries and against the effects of poor consumer spending in the US were lifted. We also selected a basket of **US banks**, which we purchased as futures using available liquidity. The markets cannot be resuscitated until the banks are back on their feet. All the attention that the banks have received from the US authorities is finally paying off, and many of them are poised to make a spectacular recovery. Already benefiting from very high margins on their lending books, they would be subject to much-reduced provisions for asset depreciation if the Geithner Plan is a success.

Evidence of an acceleration in global rebalancing led us to **increase the weighting of improvements in living standards in emerging countries from 18.5% to 25.6%**. We are still focusing on the three heavyweights of the emerging world: China, India and Brazil. The key investments for this quarter were concentrated in India (up from 3.8% to 7.8% of assets). We wanted in fact to seize the opportunity presented by the sharp fall in the Indian market (-60% compared with its peak just 13 months ago) to expand our presence there, predominantly by increasing our existing positions in banks **ICICI Bank** and **Housing Development Finance**, engineering and manufacturing company **Bharat Heavy** and major infrastructure firm **GMR**. Expecting a dramatic fall in the yen, we also invested in Japanese export firms well placed to capitalise on the expansion of neighbouring emerging economies. These included **Komatsu**, **Fanuc** and **Canon**, which should all benefit from the revival in global consumption.

**Natural resources returned to the fore, rising from 8.3% to 24.4% of assets.** With many governments unveiling major infrastructure investment plans, coupled with the resilience of leading emerging countries, energy and materials stocks are enjoying a new lease of life after being decimated in the fourth quarter of last year. **The weighting of**

**energy stocks rose from 6.5% to 13.5%** following the increase in our **Schlumberger**, **Smith International** and **Transocean** holdings and the addition of oil services company **National Oilwell** and oil producer **Petrobras** to the portfolio. **Base materials were also favoured, climbing from 2% to nearly 11% of assets.** **BHP Billiton** and **Xstrata** rejoined the portfolio, while **Freeport** and **Potash Corp** were increased.

**Gold mines continued to have a significant presence in the portfolio at 18.5% of assets.** The massive injection of cash into the financial system, especially after central banks began purchasing financial assets directly from the markets with the corresponding increase in money supply, has been a powerful force in both currency devaluation and long-term inflation. This partly explains why investors see gold (the "anti-currency") as the ultimate safe haven. This segment was also increased by the addition of Canadian gold producer **Agnico Eagle** to the portfolio.

**Defensive stocks continued to enjoy a significant weighting at 13.5% of the portfolio.** Although the Fund is positioned for a continuation of the current stock market recovery, the long-term effects of deleveraging in developed countries will eventually allow defensive stocks to prove themselves. The healthcare and staple goods sectors are usually spared during any period of retrenchment. We increased our position in **Roche**, while **Genentech** was removed due to the Roche takeover. Biotechnology is still a favourite, with **Genzyme** being added to the portfolio and investments in Australian company **CSL** and Swiss firm **Actelion** being increased. Conversely, we disposed of **Sanofi**, whose profits could be eroded by the forthcoming Obama Plan to cut spending on healthcare.

With its current portfolio, **Carmignac Investissement** is able to take the best of what the equity markets have to offer while keeping around 40% of assets in cash, defensive stocks and gold mines as a safety net. The management team will remain vigilant and will be quick to reduce the Fund's exposure if changing market conditions indicate a need for this.

Among the best performers this quarter, we note:

Stocks	Performance
<b>Freeport Mac Moran</b> , copper, United States	+56%
<b>Addax Petroleum</b> , oil and gas exploration and production, Canada	+30%
<b>Transocean</b> , oil services, United States	+25%
<b>Petrobras</b> , oil production, Brazil	+24%
<b>Yamana Gold</b> , gold mines, Canada	+20%
