

CARMIGNAC PORTFOLIO FLEXIBLE BOND A EUR ACC

LUXEMBOURG SICAV SUB-FUND

Recommended
minimum investment
horizon:

3 YEARS

LU0336084032

Monthly Factsheet - 30/04/2024

INVESTMENT OBJECTIVE

Carmignac Portfolio Flexible Bond is an international fixed income UCITS fund that implements interest rates and credit strategies across the globe while systematically hedging the currency risk. Its flexible and opportunistic style enables the Fund to implement a largely unconstrained, conviction-driven allocation strategy across global bond markets. In addition, the Fund seeks to invest sustainably for long-term growth and implements a socially responsible investment approach. The Fund aims to outperform its reference indicator over three years.

Fund Management analysis can be found on P.4

FUND MANAGEMENT ANALYSIS

MARKET ENVIRONMENT

Investors lowered their expectations of key rate cuts at the Federal Reserve this year, pushing up yields such as the US 2yr, which gained 34 bps over the month to pass the 5% mark. This readjustment happened gradually over April as inflation figures were particularly solid across the Atlantic. The consumer price index in particular surged to +3.5% y/y. The roots of inflation are keeping Fed members on their guard as retail sales and employment data point towards a no-landing scenario for the US economy. Desynchronisation continues with the planets aligning in the Eurozone where inflation eased further to +2.4% y/y, allowing the ECB to take a much more dovish tone. The economic recovery is more visible in leading indicators as well as growth figures, which are beating the consensus forecast. However, this uncoupling has not helped European yields, which have followed the same upward trajectory as their US equivalents. The 10-year Bund yield gained 29 bps in April. The geopolitical situation has deteriorated in the Middle East after Iran's bombardment of Israel, fuelling risk aversion among investors as well as inflation, with commodity prices surging.

PERFORMANCE COMMENTARY

Our Fund fared much better than its reference indicator over April, in hostile conditions for government and corporate bond markets. This lead resulted from the resilience of our performance drivers and the Fund's low modified duration. Our buy-and-hold strategies keep adding to the portfolio's returns, while our inflation-linked instruments are benefitting from the global economy's more upward trajectory and the deterioration of the geopolitical situation. We scaled back our credit hedging in April after spreads widened. We also increased exposure to US short-term yields and emerging market debt through positions in Mexico and Brazil.

OUTLOOK AND INVESTMENT STRATEGY

The main developed economies' robustness is paradoxically good but also slightly worrying news for the markets, as it results solely from countries' new budget deficit paradigm. The increase in borrowing has created imbalances that are starting to weigh on bonds, as fiscal policy contradicts the monetary policy goals of the main central banks. This no-landing scenario for the economy also rules out any prospect of inflation returning to target, as economic data continues to amaze investors. On top of this, commodity prices – which had been the main factors behind disinflation – have surged, and will probably now weigh on producer and consumer price indices. This economic outlook suggests we should be keeping the portfolio's modified duration low, with a preference for the short end of yield curves. We are remaining short on the long end, for which abundant supply is likely to meet lower demand at a time when central banks are reducing the size of their balance sheets. We are also short on Japanese government bonds as the BoJ started its rate-hiking cycle in March, and is battling to shore up its currency. On corporate bond markets, we are keeping high gross exposure to sub-segments that offer good carry, such as subordinated financial debt and structured credit, while consolidating our net exposure through cheap hedging to cushion any exogenous shocks on credit markets. The weighting of our inflation-linked strategies is still high, as these should benefit from raised inflation expectations and provide good cover from any increase in geopolitical risk.

GLOSSARY

Duration: A bond's duration is the period beyond which interest rate variations will no longer affect its return. The duration is like a discounted average lifetime of all flows (interest and capital).

High yield: A loan or bond rated below investment grade because of its higher default risk. The return on these securities is generally higher.

Investment grade: A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

Investment/net exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Modified duration: A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer).

SFDR Fund Classification: Sustainable Finance Disclosure Regulation (SFDR) 2019/2088. EU Act that requires asset managers to classify funds into categories, "Article 8" funds promote environmental and social characteristics, "Article 9" funds have sustainable investments as a measurable objective. In addition to not promoting environmental or social characteristics, "Article 6" funds have no sustainable objectives. For more information, please refer to <https://eur-lex.europa.eu/eli/reg/2019/2088/oj>

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Yield to Maturity: Yield to Maturity corresponds to the concept of actuarial yield. It is, at the time of calculation, the estimated rate of return offered by a bond in the event it is held until maturity by the investor. Note that the yield shown does not take into account the FX carry and fees and expenses of the Fund.

ESG DEFINITIONS & METHODOLOGY

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated June 2021. <https://www.msci.com/documents/1296102/15388113/MSCI+ESG+Fund+Ratings+Exec+Summary+Methodology.pdf/ec622acc-42a7-158f-6a47-ed7aa4503d4f?t=1562690846881>.

Principal Adverse Impacts (PAI): Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

Sustainable Investments: The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

Taxonomy Alignment: In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf

(1) of the amount you pay in when entering this investment. This is the most you will be charged. Carmignac Gestion doesn't charge any entry fee. The person selling you the product will inform you of the actual charge.

(2) We do not charge an exit fee for this product.

(3) of the value of your investment per year. This estimate is based on actual costs over the past year.

(4) of the value of your investment per year. This is an estimate of the costs incurred when we buy and sell the investments underlying the product. The actual amount varies depending on the quantity we buy and sell.

(5) when the share class overperforms the Reference indicator during the performance period. It will be payable also in case the share class has overperformed the reference indicator but had a negative performance. Underperformance is clawed back for 5 years. The actual amount will vary depending on how well your investment performs. The aggregated cost estimation above includes the average over the last 5 years, or since the product creation if it is less than 5 years.

(6) Please refer to the prospectus for the minimum subsequent subscription amounts. The prospectus is available on the website: www.carmignac.com.

MAIN RISKS OF THE FUND

INTEREST RATE: Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CREDIT:** Credit risk is the risk that the issuer may default. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **EQUITY:** The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

The Fund presents a risk of loss of capital.
